Insert size estimation

This estimation is based on paired-end overlap analysis, and there are 54.371982% reads found not overlapped.

The nonoverlapped read pairs may have insert size <30 or >272, or contain too much sequencing errors to be detected as overlapped.

Before filtering

Before filtering: read1: base contents

Value of each position will be shown on mouse over.

Before filtering: read1: KMER counting

Darker background means larger counts. The count will be shown on mouse over.
